

StoneGate™ SSL VPN – secure access from anywhere, at any time, with any device

In today's business world, if you want to stay ahead of your competition, you must be able to act on up-to-date information. And you must be able to access this information from wherever you are.

Create new business opportunities

Exploit the full potential of your networks and knowledge capital

Networking opens new doors and new business opportunities. Together with your partners you can rollout new products faster to new markets, improve sales and provide your customers with better support services. Maximising the synergy benefits requires efficient sharing of information. Securely. With StoneGate™ SSL VPN you can share valuable information within your organization and beyond. And you can be sure there will be no traces for anyone to see.

Faster time to money

Streamline your business processes

Easy real-time access to your corporate data eliminates bottlenecks from your business processes. When you want to remove inefficiency and strengthen the mobility of your organization, StoneGate SSL VPN is your solution. StoneGate SSL VPN offers employees and partners unmatched flexibility. Security is not an issue.

Ensure easy mobile access

StoneGate SSL VPN offers revolutionary freedom and flexibility – securely

For the IT administrator, StoneGate SSL VPN provides an easy way to manage the mobile access and its security. For end users, the solution provides all applications within a single portal, conveniently and securely.

StoneGate™ SSL VPN

StoneGate™ SSL VPN is an optimized access solution for total mobility, unmatched security and ease of management.

Total Mobility & Easy Access

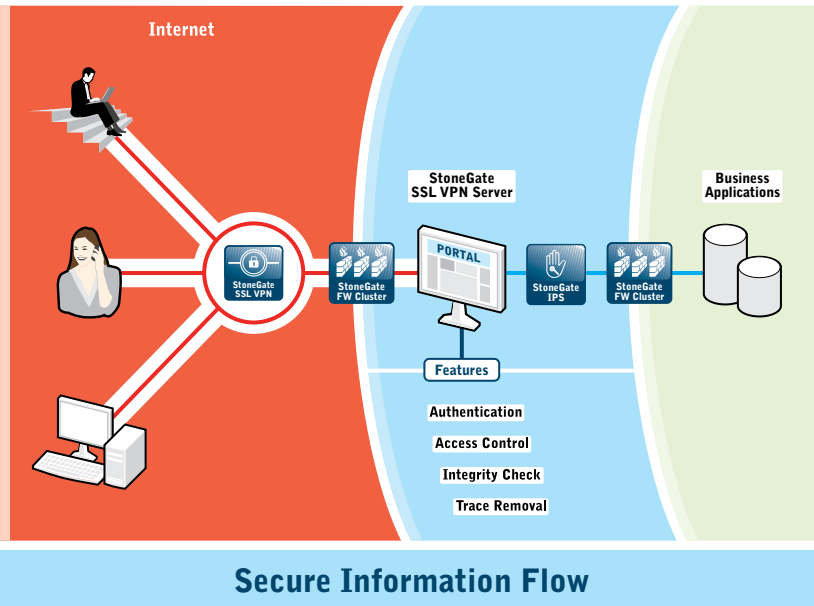

- Flexibly established from anywhere, at any time, with any device
- Presents all types of back-end data safely without direct access to the actual systems
- Offers a single point of access with an adaptive portal for all applications
- Offers single sign-on for different applications
- Provides a single, easy-to-use connectivity solution regardless of the connectivity media (UMTS, WLAN)

Strong Security

- No direct access to actual back-end systems
- Strong encryption
- Several authentication methods tailored according to your needs, including unique mobile phone authentication
- Unconditional security with granular and versatile access control
- End-point integrity by checking the security level of every device each time you connect as well as during the connection
- Trace removal after the remote session, regardless of the access point – in the park, at home, at the airport, in a net café

Flexible Deployment and Easy Administration

- Easy and fast to integrate to existing access control and back end applications
- Truly adaptive to support even the most demanding configurations. Challenging installations bring out the uniquely flexible nature of StoneGate SSL VPN
- Easy to set up with configuration wizard
- Smooth daily administration with administration wizard
- Comprehensive view on access security
- Comprehensive reporting to meet the compliance requirements

"I just cannot imagine how I could do my job if I had to wait until I get back to the office to check the facts for an offer. If the customer wants to know something, I need to be able to give the answer on the spot, not next day or next week."

—Richard, Salesmanager

"In a company of this size – or of any size, for that matter – the IT admin staff just cannot be running around taking care of everything personally. Time is money, and thus too valuable to be spent on trivial tasks. With StoneGate SSL VPN, there is no need to worry about client installations or updates. Since I can rely on the fact that the network is secured, I can focus on more demanding issues."

—Jack, Manager, SIM
