StoneGate™

Secure Connectivity Solution

StoneGate Security Connectivity Solution unifies Firewall, VPN, IPS, and SSL VPN to provide secure, optimized, resilient connectivity in a centrally managed system. With StoneGate you can keep your network secure and your connections constant so your business can continue to grow and prosper.

Secure Information Flow

Doing business in today's environment of rapid growth and technology innovation means working smarter, trying out new ideas and improving efficiencies.

However, making progress can be tough when you're faced with ongoing challenges of ensuring network security, always-on connectivity, and regulatory compliance, along with efficiently managing your resources and bottom-line.

Now you can address all of these challenges with StoneGate Secure Connectivity Solution – unified Firewall, VPN, IPS, and SSL VPN in a centrally managed system. Since 1990, customers worldwide have been using Stonesoft solutions to ensure secure information flow throughout their networks. They're expanding their operations while maintaining always-on connectivity and data integrity. They're improving the quality of their services while relieving staffing pressures. All while they're gaining significant savings.

Layered Security

Instead of just one layer of protection, StoneGate Secure Connectivity Solution consists of several layers that seamlessly work together to protect your network. Now you can stop attacks before they reach vulnerable systems and applications using a combination of protection methods at each layer. At the same time, you can ensure secure information flow throughout each segment of your network – mobile users, remote offices, demilitarized zone (DMZ) and internal systems.

Stonesoft's layered security approach allows you to simply and cost-efficiently manage and monitor the security and connectivity throughout your entire network.

Resilient, Optimized, Secure Connectivity

According to a 2007 Infonetics study, companies are losing as much as 2.2 percent in annual revenue, or about \$30 million on average due to security attacks. Whether it's from organized security attacks, natural disasters or human error, network outages mean lost revenues, productivity and corporate credibility.

With Stonesoft's patented Multi-Link technology you can ensure seamless network failover in the event of Internet access outages or lost connections between firewalls and outside networks – regardless of the type or number of connections needed to support your business.

With StoneGate's Quality of Service (QoS) with built-in load balancing you can optimize your network and support emerging technologies, such as VoIP and video conferencing.

Additionally, StoneGate is the only solution in the industry that allows you to cluster up to 16 devices to spread the load across multiple firewalls and ensure high availability.

"Our business demands a stable and reliable solution that can be easily managed. The StoneGate Platform provides high availability and security administration in a unified, simple presentation. With minimal resources required for operation, the StoneGate solution keeps our costs down and allows us to focus on our core business functions."

Bill DeSantis
IT Manager

Centralized Management

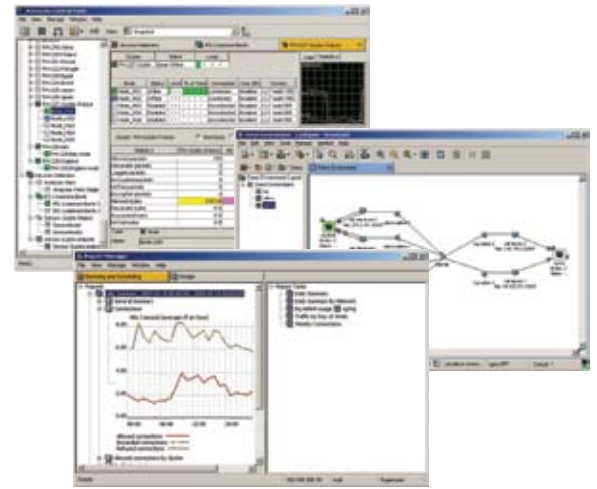

With the continuing onslaught of security threats and changing network demands, IT staffs are overwhelmed with trying to keep up with incidents and updating security policies, especially with distributed offices where resources may be limited. Plus the lack of integration can lead to higher costs.

With StoneGate Management Center your network administrators can manage thousands of devices as easily as one from a single console. They can significantly reduce incident response times with automated system tasks and the flexibility to customize response escalation algorithms. They will also benefit from easy access to shared logging, real-time reporting, incident handling, auditing and other tools. Together it means dramatically lowering the cost of ownership by making administration easier and less resource intensive.

Compliance

Keeping up with the stringent regulatory requirements – whether it's PCIA, Sarbanes-Oxley, HIPAA, FISMA or other standards – can be a challenge. It means you're under constant pressure to maintain the auditing and reporting necessary to avoid non-compliance fees and damaging your corporate credibility.

StoneGate Management Center allows you to gain the sophisticated reporting, monitoring and analysis required to address the risks and costs associated with regulatory compliance. Our centralized system provides encrypted log management and storing with filtering for auditing system performance, incident response and corporate compliance.

The StoneGate Management Center forms the core of the StoneGate Platform, providing unified management and reporting for StoneGate firewalls, VPNs and IPS.

Lowest TCO and Fastest ROI

When comparing different solutions, decreasing TCO and increasing ROI are some of the most important issues, especially when you're working with ever tightening budgets and resource constraints.

For information-intensive organizations with distributed environments, Stonesoft has a proven track record of helping our customers significantly reduce the costs and complexities typically associated with other multiple vendor solutions.

StoneGate solutions are all-inclusive. There are no add-on purchases to get the full functionality your organization needs. The system's architectural modularity gives you the flexibility to tailor the solution to fit specific requirements. Plus you can easily integrate StoneGate with other solutions to protect your long-term technology investments.

You can reduce the time for implementations and lower administration costs with simple drag-and-drop functionality. You can eliminate the need for off-hour work with built-in clustering functionality that allows production traffic to flow unaffected during firewall maintenance breaks. You can select the most cost-effective network links and ensure always-on connectivity with our Multi-Link technology. In addition, you can simplify the management of your entire network security with StoneGate Management Center.

"StoneGate provided the most immediate ROI and the lowest TCO, all while addressing AIT's needs for resilient connectivity and improving our network from a unified management system. The active load balancing, coupled with StoneGate's bandwidth management and QoS also allowed AIT to utilize other technologies that resulted in lower costs and improved network functionality."

Caleb Wilson
Senior Network
Engineer

StoneGate SSL VPN

Flexible yet secure connectivity at any time, from anywhere, with any device

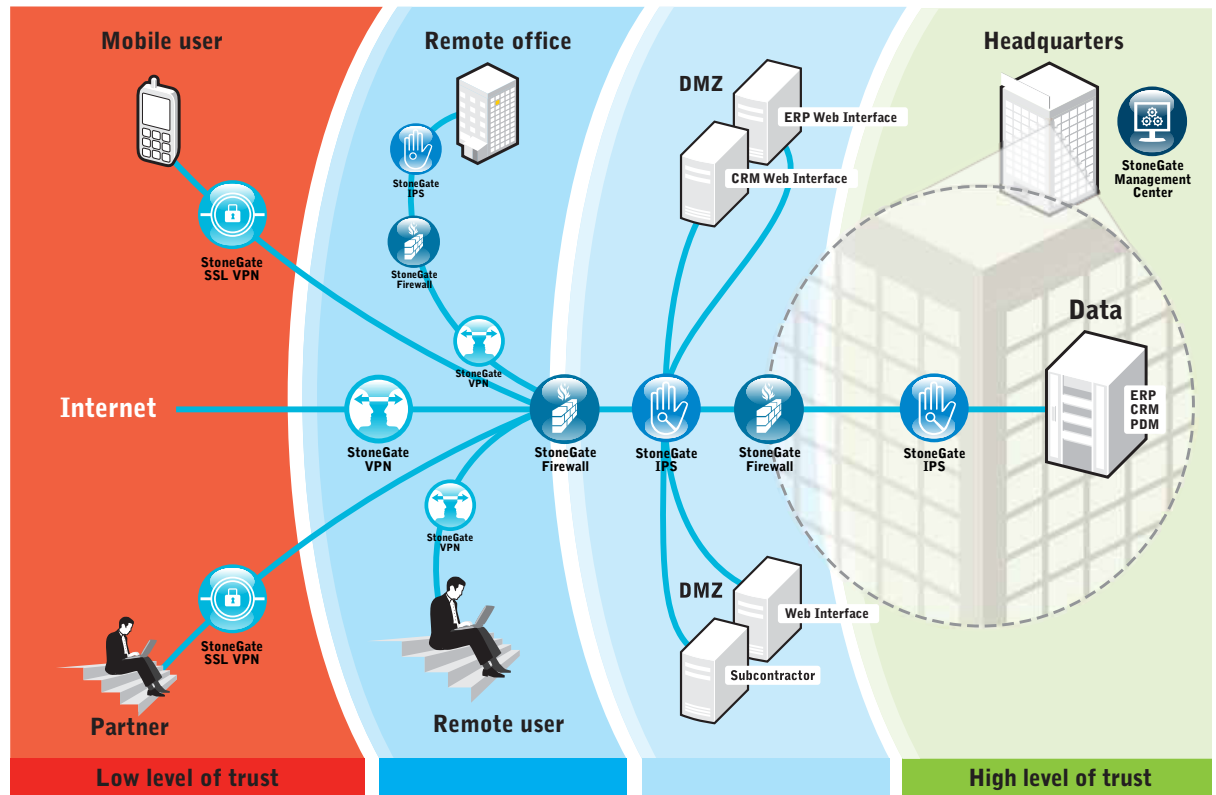

- Encrypted mobile access over the Internet using standard web browsers
- End-point security control
- Automatic trace removal
- Strong authentication with single sign-on
- Access to resources can be granted case-by-case
- Comprehensive yet unified management with easy to use tools for compliance auditing

StoneGate Firewall/VPN

Strong perimeter defense

- Patented Multi-Link technology
- ISP multi-homing
- Cluster up to 16 devices
- Load balancing and server load balancing
- HTTP deep packet inspection
- Simplified security policies
- Easy system backup and restore
- Fail-safe remote upgrades
- Bandwidth management and QoS
- Drag-and-drop routing, automatic anti-spoofing
- Blacklisting and whitelisting with IPS

StoneGate Management Center Centralized management for your entire network

- Central repository and database
- Management server high availability
- Built-in reporting
- Log browsing and filtering
- Diagrams
- Policy-based alert escalation
- Routing and anti-spoofing
- Security policies
- Remote upgrade
- Monitoring
- Incident management
- Audit log

StoneGate IPS Comprehensive protection for internal systems and applications

- Unique expressions-based approach for customized threat detection
- Transparent Access Control module for segmentation and firewall access control without network configuration changes
- Prevention mechanisms updated dynamically
- Correlation reduces false positives
- Easy configuration
- Fast and accurate reports
- Incident management
- Operate as IDS and/or IPS simultaneously

Key Benefits

- **Layered Security** – Integrated enterprise-level Firewall, VPN, IPS, and SSL VPN for unified threat protection from internal and external attacks.
- **Resilient, Optimized, Secure Connectivity** – Ensure secure connectivity with our patented Multi-Link technology, QoS, active load balancing, bandwidth management, and unique clustering capabilities.
- **Centralized Management** – Manage highly dispersed networks from a single console, reduce incident response times and lower the cost of everyday network administration.
- **Compliance** – Efficiently run the auditing reports necessary to avoid the risks and costs associated with regulatory compliance.
- **Lowest TCO and Fastest ROI** – Reduce the costs and complexities compared to traditional multiple vendor solutions.

About Stonesoft

Stonesoft Corporation is an innovative provider of integrated network security solutions to secure the information flow of distributed organizations. Stonesoft customers include enterprises with growing business needs requiring advanced network security and always-on business connectivity.

StoneGate Secure Connectivity Solution unifies firewall, VPN, IPS and SSL VPN blending network security, end-to-end availability and award-winning load balancing into a centrally managed system. The key benefits of StoneGate Secure Connectivity Solution include low TCO, excellent price-performance ratio and high ROI.

StoneGate Management Center provides unified management for StoneGate Firewall with VPN, IPS and SSL VPN. StoneGate Firewall and IPS work together to provide intelligent defense throughout the enterprise network, while StoneGate SSL VPN provides enhanced security for mobile and remote use.

Founded in 1990, Stonesoft Corporation is a global company with corporate headquarters in Helsinki, Finland and Americas headquarters in Atlanta, Georgia. For more information, visit www.stonesoft.com.
